

## Straight Egyptian Sire Lines

By Joe Ferriss

Images from Dr. Karin Thieme, Judith Forbis and Ferriss archives

Unlike most other equine breeds, the Bedouin tribes of Arabia that created the Arabian horse celebrated its matriarchy. A horse's identity was handed down by the name of its mother's family. The first thing that a Bedouin would ask about an Arabian horse, a stallion or a mare, is what is its strain – the name of its female line? Any stallion of importance had to be from one of the great female families. This is quite different from established European breeds such as the Thoroughbred who often identified a horse from its patriarchy or sire line first.

As the Arabian horse became popular world wide and traveled farther from its originating culture, the name of the female line was not always as significant as it was for the founding culture. However, horses of straight Egyptian lineage have generally stayed with the Bedouin tradition of often identifying the strain, the female line of a horse so today it is not difficult to ascertain what celebrated female line such horse descends from. Within this Heritage section the reader will find a section on dam lines of straight Egyptian Arabian horses. However first we will review the subject of the sire lines of straight Egyptian Arabian horses.

A sire line today is an indicator of the population distribution of a particular stallion. While a mare may only average about 8 to 12 foals in her lifetime, a stallion could have as many as the great Khemosabi, sire of 1,251 foals in his lifetime. Of the hundreds of thousands of Arabians worldwide today, as a bloodline or even as a nationality element, the straight Egyptian Arabian is only a very small fraction which some estimate at less than 5%, others say a bit more than that. Yet a review of the top 30 sires in the world in terms of the number of get they sired in their lifetime, more than one third of them have a straight Egyptian sire line and account for about one third of the 23,758 foals sired by the top 30. So the sire line is a significant figure worth looking at.

Though there have been numerous sires in the long history of Egyptian breeding the male lineage in Straight Egyptian breeding today is distilled down to four existing sire lines:

**Zobeyni 1840**

**Jamil El Kebir 1870**

**Saklawi I 1880**

**El Deree 1920**

The preponderance or scarcity of a sire line is an indicator of the distribution of certain blood. To accurately explain why some sire lines are prolific and others are rare is speculation at best because there can be many arbitrary factors that influence why some people find one stallion more popular than another. If one particular sire line is more popular for halter champions, another may be more popular for performance horses and another for endurance and racing. In one decade performance may be popular with breeders of that decade while in another decade halter may become the dominant part of the industry.

Sometimes an unforeseen circumstance can affect sire line choices. A case in point would be the magnificent imported Egyptian stallion \*El Mareekh (Aseel x Rawayeh) imported to the U.S. in 1979. \*El Mareekh was of the Jamil El Kebir sire line, the same as Mr. Babson's 1932 import \*Fadl. Many who saw this spectacular horse, found him breath taking and there were high hopes for him. He tragically died young, leaving less than two dozen Egyptian get. If his son Ibn El Mareekh (x Bint Deenaa) was any example, one can only wonder had El Mareekh lived a full life how he may have been able to expand upon his sire line bringing more choices for Egyptian breeders today. So let's explore the existing sire lines in straight Egyptian breeding to gain a little understanding them. The sire lines identified here are named after the first root founding Arabian in its line.

---

### **ZOBEYNI Sire Line**

Zobeyni was born about 1840. He was a grey stallion of the Saqlawi Jidran strain bred by Ibn Zubayni of the Fid'an tribe and acquired by Abbas Pasha in Egypt. This is the oldest existing Egyptian sire line. For many years it was the most popular as it is handed down via the great Crabbet sire Mesaoud who was bred by Ali Pasha Sherif in Egypt and acquired by Wilfrid and Lady Anne Blunt for their Crabbet Stud in England. Mesaoud's son \*Astraled was imported in 1901 to the U.S. as an older horse after having left get in England. His son Sotamm had gone to Egypt along with grandson Kazmeyn, both found widely in Egyptian bloodlines today but not in sire line. \*Astraled's son Gulastra would make this sire line famous. For all the popularity of Gulastra in the U.S. only one of his grandsons carried the Zobeyni sire line in straight Egyptian lines and that was Julyan (x Bint Maaroufa). Julyan sired some major winners in America but was only bred to a very small number of available straight Egyptian mares during his time. Nonetheless, his Egyptian sons El Reata Juan and Fadaan have carried the famed old Zobeyni sire line forward. It is a relatively rare sire line today but this important sire line is still available to straight Egyptian breeders.

### **JAMIL EL KEBIR Sire Line**

This is the second oldest and second most represented Egyptian sire line. Jamil El Kebir was a chestnut stallion of the Saqlawi Jidran strain. He was born in the 1870s from Ibn Zubayni of the Mhayd section of the Fid'an Bedouin tribe. Lady Anne Blunt referred to him as "the old chestnut Ibn Sbeyni Seglawi." He was acquired by Prince Ahmed Pasha Kemal. The Prince is the breeder of Jamil El Kebir's grandson Dahman El Azrak who Prince Mohammed Ali described as a horse of extreme quality that transmitted good Arab type and strong bone. The main horse who carries the banner for this sire line is Dahman El Azrak's son Rabdan El Azrak.

The first representatives of this sire line to come to America were the stallions \*Zarife (Ibn Samhan x Mahroussa) and \*Nasr (Rabdan El Azrak x Bint Yamama). Both of these stallions were imported by W.R. Brown in 1932. \*Zarife was imported as a youngster so had no get in Egypt. He was a very handsome and athletic horse who passed on his athletic ability in good measure especially in endurance horses. His only Egyptian son is the famous Hallany Mistanny (x \*Roda) who sired one straight Egyptian daughter, Mist Aana so Hallany Mistanny has no sire line in Egyptian breeding. \*Nasr was already an older horse when imported. He had been much admired at Prince Mohammed Ali's stud and was raced in Egypt prior to his importation. His blood in Egypt is narrowly found in female descendants but he left no sire line there. In America he became a highly regarded sire but at a time when there were so few Egyptian mares in the country, \*Nasr had very little opportunity to establish an Egyptian sire line. A few of his Egyptian sons were exported to other countries where they were not bred to Egyptian mares though their blood is found today in other bloodlines. Late in his life \*Nasr got one Egyptian son in the U.S., Sirecho (\*Nasr x \*Exochorda). While Sirecho produced several sons of note, his sons are only represented through their daughters so there is no longer a sire line from Sirecho today.

Only months after \*Nasr's importation to the U.S. Mr. Babson went to Egypt and imported a group of Arabians which became the backbone of most straight Egyptian bloodlines in the U.S. for decades before the first Nazeer blood arrived. The only sire in Mr. Babson's group was \*Fadl (Ibn Rabdan x Mahroussa). A cousin to \*Nasr, \*Fadl became the one who did establish an Egyptian sire line to Jamil El Kebir in the U.S. \*Fadl was a handsome horse of classic Arabian type but also an athletic horse who became a part of many performance pedigrees in the U.S. Within Egyptian lines, \*Fadl's sons Fa-Serr (x \*Bint Serra), Fabah (x \*Bint Bint Sabbah) and Lothar (x Habba) carried the Jamil El Kebir sire line forward in America and it is still available today, mostly from Babson and other "old Egyptian" breeding.

Meanwhile back in Egypt the premier source of the Jamil El Kebir sire line was the heavily used Ibn Rabdan (Rabdan El Azrak x Bint Gamila). He was not only used by the R.A.S. government stud but also the various Princes in their private studs, so he saw a wide opportunity to establish a sire line. Prince Kemal El Dine is the breeder of the Ibn Rabdan son Ibn Fayda who went to the Inshass stud of King Fouad. Ibn Fayda created a sire line eventually carried forward by the great sire Sameh. Though Sameh is most famous for his National champion daughters, his sons \*Ibn Hafiza, \*Sultann, and Aseel have all established male branches via a number of sons. \*Ibn Hafiza is mostly represented by Tammen, \*Sultann by Makhsous and Aseel by Ibn El Mareekh.

Ibn Rabdan sired two stallions who were three-quarter brothers to Mr. Babson's \*Fadl. They were Hamdan and Shahloul. Hamdan was gifted to the Royal Inshass stud where he sired Anter (x Obeya), who has three sons that

carried on the Jamil El Kebir sire line at the E.A.O. Another Anter son was the handsome, brilliant moving black stallion Gharib who went to Germany and established a sire line now found internationally. Hamdan also sired a son named Hamdan II (x Folla) who very narrowly maintained a male line. Shahloul was mainly a broodmare sire remembered for his magnificent daughters Bukra and Moniet El Nefous. However he sired two sons who represent him. The first was El Sareei (x Zareefa), the handsome bay stallion who rarely sired a male horse, mostly all females. However El Sareei's popular son \*Tuhotmos (x Moniet El Nefous) managed to carry on the Shahloul branch. Shahloul also sired Mashhour (x Bint Rustem) whose son Seef (x Elwya) became an important sire at the E.A.O., and is represented by \*Ibn Safinaz in the U.S.

In Egypt the other source of Jamil El Kebir's line was the stallion Ibn Samhan (Samhan x Nafaa El Saghira). Ibn Samhan sired Kheir (x Badaouia) and legendary race horse Balance (x Farida). Kheir's son Gassir became an outcross stallion for the Nazeer breeding at the E.A.O. and has several sons representing him. For all the fame of the great race horse Balance, his branch of the Jamil El Kebir sire line is very rare indeed. His son Nasrulla was a great athlete but became mainly a mare sire with a very rare male representation. Balance's other son Emam was also a good race horse but has only one male to carry on the banner for this sire line.

### **SAKLAWI I Sire Line**

Without question the Saklawi I sire line is the most populated sire line within both straight Egyptian breeding and also within the Arabian breed in general. This is the sire line that is represented in ten of the top 30 sires in the breed worldwide. The stallion Saklawi I originates with famed 19th century Egyptian breeder Ali Pasha Sherif. He was born sometime in the 1880s of the Saqlawi Jidran strain. His blood is found in Egyptian breeding through two daughters and three stallions. Only one of his sons created the sire line to him, the stallion Saklawi II out of Ali Pasha Sherif's El Dahma. Saklawi II is the grandsire of Mansour who sired world renowned Nazeer from whom this sire line is carried forward with many branches. Nazeer is not only of the Saklawi I sire line but he also has five crosses to Saklawi I so is a strong source of his blood.

There are numerous Nazeer sons who carry his sire line banner but among the most globally prominent of these are Hadban Enzahi, Morafic, Ansata Ibn Halima and Aswan. Since Aswan was gifted to Russia as a young horse his line begins in Russia so he does not have a sire line within straight Egyptian breeding but it is nonetheless enormous through his many Russian bred sons as well as his son Palas in Poland. In America the most famous of Aswan's branches is via \*Padron and the huge patriarchy he has created. Nazeer's first-born straight Egyptian progenitor of his sire line was the pure white stallion Hadban Enzahi who was exported to Germany where he stood at Weil-Marbach. His first straight Egyptian sons were not born until he was 15 years old. Within straight Egyptian lines, \*Morafic created the largest patriarchy to Nazeer siring a number of very heavily used straight Egyptian sons and grandsons. Perhaps his largest branch in number of male representatives comes via his son Shaikh Al Badi, sire of Ruminaja Ali, Alidaar and others. \*Ansata Ibn Halima's web is also very large through both sons and daughters but his popular son El Hilal extended his branch greatly in the U.S. with 639 get. There are many popular sons of \*Ansata Ibn Halima and his patriarchy is extended internationally via his son Ansata Halim Shah.

### **EL DERE E Sire Line**

The sire line to El Deree is the most relatively recent sire line. El Deree was a classic example of the true Bedouin war horse, a stallion of quality conformation, who was very fast as a runner and a very good sire. He was a 1920 grey stallion of the Saqlawi Shaifi strain acquired from Hussayn al-Dayri from the al-Jibur tribe. He was taken to Egypt and became a founding sire for King Fouad's Royal Inshass Stud. Later he was gifted to the R.A.S. where he sired the legendary Sid Abouhom. Sid Abouhom was a great race horse and much admired by Director General VonSzandtner, manager of the E.A.O. Sid Abouhom's daughters formed the core of VonSzandtner's plans for the E.A.O. while most sons were sold for racing. Under these circumstances one would think that the sire line to El Deree would vanish. However there were a few sons of Sid Abouhom who were incorporated later into the E.A.O. breeding. Most notable of these is the fine race horse Amrulla out of the Balance daughter Zaafarana. Amrulla sired the magnificent stallion Akhtal, one of the most spectacular since \*Morafic. Akhtal and half brother Nawaf continued the sire line of El Deree for the E.A.O. Two other Sid Abouhom sons produced male representatives also, Ibn Abla and Ibn Hamama, who only have one or two representatives in the U.S. so are very rare indeed.

What follows here is a sire line chart showing the various branches of these sire lines.

**Egyptian Sire lines within Straight Egyptian breeding:** (\* asterisk denotes imported to North America)

Indentations in this chart represent succeeding generations of males. This chart does not imply that there are no more than what appear here but these include those who represent the preponderance of their line. There are certainly younger stallions that are sons or grandsons of those shown here, so this is not the final word on sire lines. The most heavily represented branches of the Saklawi I sire line are \*Morafic [32 sons] and \*Ansata Ibn Halima [45 sons]. They are so prolific and so well known internationally as are many of their sons and grandsons so only the estimated number of sons in their line are given. It is often easy to determine a Nazeer sire line individual in any 6 generation pedigree but for this chart, only the main branches are listed here. The rarer sire lines have been extended a bit further owing to the scarcity of sons representing them. Primary branches of sire lines are also shown in boldface.

**ZOBEYNI** c. 1840 grey stallion - A Saqlawi Jidran stallion of Ibn Zubayni of the Fid'an in the stud of Abbas Pasha.
